- The Software with self calibrating function, which avoid to accuracy by adjusting relays after open the case, gently improve the stability of the accuracy.

## PRODUCT FEATURES

- Meets all the requirement of field test. This tester with standard 3 Phase voltage, and 3 Phase Current Output, voltage 125 V/Phase, Current 30 A / Phase, 3 Phase in parallel can up to 180 A. Digital Signal Processor Microcomputer. Not only test the traditional relays and protectors, but also test the modern microcomputer relays, special for transformer differential protection and transfer equipment
- All technical indicators fully meet the International standards. Technical condition of the relay computer test device.
- The windows system comes with the restore function ; avoid system crashes caused due to illegal shutdown or malfunction e.t.c.
- Equipped with Ultra-thin industrial keyboard and optical mouse, complete a variety of operations using keyboard or mouse the same as ordinary PC.
- Using high - fidelity linear amplifier. Both to ensure the accuracy of a low current, but also guarantee the stability of the high current.
- USB Directly connect with PC, without any adopter cable, easy to use.
- Can be connected to a laptop computer (Optional). Laptop computers and industrial machines use the same software, no-need to re-learn the method of operation.
- With a separate DC auxiliary voltage source, Output voltage 110 V (1A), 220 V (0.6 A), provides relays or protective devices which Require DC Power.
- The software with self-calibrating function, which avoid to calibrate accuracy by adjusting relays after open the case, greatly improve The stability of the accuracy.
